Indian equity markets are expected to open sharply lower on Thursday, July 23, 2026. GIFT Nifty is trading at 23,867, down approximately 120 points (-0.50%) from Wednesday's Nifty futures close, indicating a weak start after Wednesday's session saw the index break decisively below the crucial 24,000 support zone. Investors remain cautious following a third consecutive session of losses, with sustained selling in banking and financial stocks continuing to weigh on sentiment. Market participants continue to track global cues, including US economic data and the Federal Reserve's policy trajectory, along with domestic earnings season developments that are likely to drive stock-specific action amid the broader weakness. Technically, with today's expected gap-down opening, the near-term structure remains corrective as long as Nifty stays below the 24,000 zone. A further breakdown could accelerate selling towards 23,800, while any stabilization attempt would need a reclaim of 24,000 to ease pressure.

Nifty 50 Performance

Wednesday's Nifty 50 opened at 24,150.45, touched a high of 24,166.30, a low of 23,961.40, and closed at 23,996.25, down 191.45 points (-0.79%). GIFT Nifty at 23,867 signals a gap-down opening of around 120 points, indicating the index may open near the 23,860–23,880 zone. The index closed below the crucial 24,000 support on Wednesday, confirming a shift from consolidation to an active corrective phase, with the index now trading below both the 24,200 and 24,000 zones that had anchored the recent recovery. Momentum indicators are likely to turn decisively negative given the scale of Wednesday's decline, reinforcing a cautious near-term bias. A sustained move back above 24,000–24,200 would be needed to stabilize the structure, while continued weakness below 23,800 could extend the decline towards 23,600.

Nifty Technical Levels

Support: 23,800, 23,600, 23,400

Resistance: 24,000, 24,200, 24,300

Bank Nifty Performance

Wednesday's Bank Nifty opened at 57,768.40, touched a high of 57,824.00, a low of 56,970.60, and closed at 57,126.80, down 708.55 points (-1.22%). GIFT Nifty's weak indication suggests Bank Nifty may open with a similar negative bias, tracking broader market weakness. The index broke decisively below the 57,500 support that had held over the previous two sessions, with sellers firmly in control through the day and only a marginal recovery into the close. Immediate support now rests at 57,000, a break of which could extend weakness towards 56,500, while 57,500 becomes the first resistance on any pullback attempt. Financial stocks are likely to remain under pressure at the open, with any bounce towards 57,500–57,800 likely to attract fresh selling unless sentiment broadly improves.

Bank Nifty Technical Levels

Support: 57,000, 56,500, 56,000

Resistance: 57,500, 58,100, 58,500

Asian Shares Rise as Chipmakers Gain, Oil Climbs

Asian shares advanced as regional chipmakers gained on expectations they will benefit from billions of dollars flowing into the artificial intelligence buildout. Oil extended its recent gains. MSCI's Asia Pacific equities gauge climbed 1%, with the Kospi — a bellwether for AI investments — rising 2.8%. Samsung Electronics Co. and SK Hynix Inc. both gained more than 3% as investors bet the South Korean chipmakers will be among the beneficiaries of the global AI spending. Nasdaq 100 futures erased earlier losses sparked by Alphabet Inc.'s higher-than-expected capital spending plan. Still, caution lingered with Alphabet Inc. sliding more than 3% in extended trading after saying it would spend more to fuel its AI ambitions. Tesla Inc. dropped 4% after missing earnings estimates, while International Business Machines Corp. edged lower after cutting full-year sales outlook. Oil advanced after Iran-backed Houthi militants said they targeted two Saudi Arabian tankers in the Red Sea, escalating the Middle East conflict and threatening deeper supply disruptions. Global benchmark Brent rose 1.7% to \$95.70 a barrel, the highest level since early June.

China Aims to Boost Renewable Energy Consumption 53% by 2030

- China wants renewable energy consumption to jump over the next five years and to convert intermittent wind and solar into more dependable sources of electricity.
- Renewable power use should rise to about 1.8 billion tons of coal equivalent by 2030, up from 1.18 billion tons in 2025.
- The plan includes targets such as boosting renewable generation to 6 trillion kilowatt-hours and increasing solar thermal capacity to 15 gigawatts.

Singapore PM Rejigs Team with Younger Ministers, Focus on Energy

Singapore Prime Minister Lawrence Wong is bolstering his leadership team, elevating several younger ministers in a cabinet reshuffle following recent resignations from his bench. Among the changes announced Wednesday, first-term politician Jeffrey Siow, 48, will be promoted to transport minister and second minister for finance. One-third of Wong's cabinet will be younger than the age of 52. The appointments are effective July 27. As a reflection on the increased focus on energy matters "which are vital to Singapore's economic competitiveness and future," Wong said the Ministry of Trade and Industry will be renamed Ministry of Energy, Trade and Industry from Oct. 1.

Alphabet's \$205 Billion AI Spending Spree Raises Stakes for Tech

Alphabet Inc. set the tone for Big Tech earnings with a higher spending outlook that stoked fears of fiscal discipline falling by the wayside in the race to dominate artificial intelligence. The Google parent company on Wednesday boosted its projected capital expenditures for the year to an unprecedented \$200 billion at the midpoint. Shares fell as much as 5% in late trading on the guidance. It was a reminder that the full cost of Silicon Valley's AI rivalry is still largely unknown. Alphabet was the first of the big tech companies to report quarterly results. Meta Platforms Inc., Microsoft Corp. and Amazon.com Inc. follow next week. Altogether, the four companies telegraphed in April that they'd be spending as much as \$725 billion this year on their AI ambitions. If Alphabet's any indication, that sum will be larger by the end of next week. That's even while the returns on those investments remain unclear. Capital expenditures will be between \$195 billion and \$205 billion in 2026, Alphabet said, up from a previous estimate of as much as \$190 billion. The company said the higher guidance reflects its efforts to accelerate an expansion of AI computing capacity and book more revenue from cloud-computing clients.
